ART29345

RS3 DIESEL SOUND SPEAKER UPGRADE

The ART29345 speaker upgrade includes a very high quality 5 watt speaker, which is waterproof and has a dust screen pre-wired for installation in your RS3 engine.

INSTALLATION

Installation in the **RS3** is very simple and should only take a few minutes.

First, remove the long hood by removing the 8 phillips head screws as described in the ART29338 Instructions.

Second, unplug the original speaker from the sound system wires (gray and black) leaving the male adapter in the wires from the sound system. If you have the newer style RS3 with the circuit board, cut the orange wires from the circuit board to the original speaker and loosen the 4 screws attaching the circuit board to the floor. Feed the original sound system speaker wires from the fuel tank through the hole in the floor so the new speaker may be plugged into these wires.

Third, remove the original speaker (4 phillips head screws) and replace it with the new speaker.

Fourth, plug in the new speaker wires to the wires from the sound system. If you have the newer version of the RS3, retighten the 4 screws for the circuit board.

Fifth, replace the long hood with the 8 screws removed in the first step.

Finally, test the system and adjust the volume and balance controls and enjoy much more vibrant sound from your **ARISTOCRAFT TRAINS RS3**.
